REMARKS

Claims 1-34 are in the case. The claims have been made subject to a requirement to restrict. Claim 12 has been canceled.

In response to the office action mailed 3/15/2006 applicants failed to respond completely to the requirement for election of species. Applicants thank the examiner for the clarification of the species to be elected and respond as follows:

<i>Election Option</i>	<i>Applicants Response</i>
A) type of semiconductor; e.g. as recited in claim 5;	Iron Oxide
B) a monolayer which comprises (1) a molecule with a reactive group, (2) a peptide, (3) tiopronin, or (4) GSH. If group (1) is elected, then applicant is further required to elect a single reactive group from those recited in claim 6.	(3) tiopronin,
C) a shielding component; e.g. as recited in claim 8;	short chain ethylene glycol oligomers
D) a first binding domain; e.g. as recited in claim 9;	Glutathione-S-transferase/glutathione,
E) a recognition or capture moiety to which the second binding domain binds comprising a (1) nucleic acid, (2) peptide, (3) biological cell or (4) inorganic nanotube. If nucleic acid is elected, then applicant is further required to elect a single nucleic acid binding sequence and/or moiety from those recited in claims 11-14, 22, and 32-34. If a binding sequence is elected, then it must correspond with the particular moiety elected. If nanotube is elected, then applicant is further required to elect a single nanotube binding sequence from those recited in claim 17.	(1) nucleic acid, additional election to zinc finger sequence, (Claim 13)
